Overview

Welcome to Round 2 of the Purple Tech Challenge 2026.

This round is designed for builders who can think beyond code — engineers who can break down ambiguous problems, make strong architectural decisions, and build production-ready systems under real-world constraints.

Unlike traditional coding rounds, this challenge mirrors the kind of problems solved inside high-scale technology teams every day. You'll work with raw inputs, imperfect data, operational edge cases, and open-ended engineering decisions — just like in a real production environment.

This year's challenge focuses on building an AI-powered Store Intelligence System from raw CCTV footage. Participants are expected to design and implement an end-to-end pipeline that combines computer vision, event streaming, real-time analytics, anomaly detection, and production-grade APIs.

You are free to choose your own architecture, models, frameworks, and engineering approach. AI tools are fully allowed — and encouraged. What matters is not just what you build, but how you think, evaluate trade-offs, and explain your decisions.

We are looking for:

- Strong problem-solving and system thinking
- Practical AI engineering skills
- Production-ready implementation quality
- Ownership and decision-making ability
- Clear technical reasoning and documentation

The challenge is intentionally open-ended. There is no single "correct" solution.

Ship something you are proud of.

Purple Tech Challenge 2026 — Round 2 Problem Statement

Built for engineers who love solving real-world AI + system design problems at scale. This challenge focuses on building an end-to-end Store Intelligence System using raw CCTV footage, event streaming, real-time analytics, anomaly detection, and production-ready APIs.

The problem statement covers:

- Detection & tracking pipeline
- Real-time intelligence APIs
- Event schema design
- Production readiness expectations
- AI-assisted engineering decisions
- Live dashboard requirements

To view the complete challenge details, evaluation criteria, architecture expectations, and submission guidelines, click [here](#) to download the full problem statement PDF.

Rules

- This is an individual participation hiring hackathon, you have participate individually.
- The hackathon will start at **May 29, 2026 08:00 PM IST (Asia/Kolkata)** and end at **Jun 03, 2026 11:59 PM IST (Asia/Kolkata)**, you work on your hack during the allotted time only.
- It's an online round, you can participate from anywhere.
- There is 1 themes/problem-statement of the hackathon, you must submit a hack that is in one of these themes.
- Your hack must be developed entirely during the Hackathon duration. You may use open source libraries and other freely available systems / services such as Google Maps, Facebook Connect,

Twitter feeds etc.

- The intellectual property of your code belongs only to your team.
- By participating in the hackathon, you agree to the [terms and conditions](#) of HackerEarth.
